Welcome

Thank you for buying Client Finder Agent Starter. You type a business type and a city, and it finds up to 60 local businesses on Google Maps through Google's official Places API. It checks each one for a website problem you can fix, such as no website or a slow mobile site, and gives it a score from 0 to 100. Claude (an AI model) then writes a short pitch using only the facts it found, every lead is saved to your Google Sheet, and pitches for businesses with a public email become Gmail drafts that you read and send yourself.

Starter is built for web designers. It runs in **n8n**, an automation tool where small steps (called *nodes*) are joined into a *workflow*.

What's in your download

File	What it is	When you need it
START-HERE.pdf	This page	Now
SETUP-GUIDE.pdf	Step-by-step setup of Google, Anthropic, n8n and your sheet	First
client-finder-web-design.json	The workflow file you import into n8n	During setup
Client-Finder-CRM.xlsx	Your lead list template, tab **Leads** (a *CRM* is a list of contacts and where each one stands)	During setup
PROMPTS.pdf	How to tune your offer and the style of your pitches	After your first search
LICENSE.txt	What you may and may not do with the files	Any time

Important: You need an n8n account (n8n Cloud or self-hosted, version 1.123 or newer), a Google account with billing turned on in Google Cloud, and an Anthropic account with prepaid credits. SETUP-GUIDE.pdf shows you how to set up each one.

Cost: Apart from your n8n plan, you pay Google and Anthropic directly for what you use. With the default AI model, one pitch costs roughly 1-2 US cents. Google gives a free monthly allowance for Maps searches, but set a budget alert anyway.

Your first hour

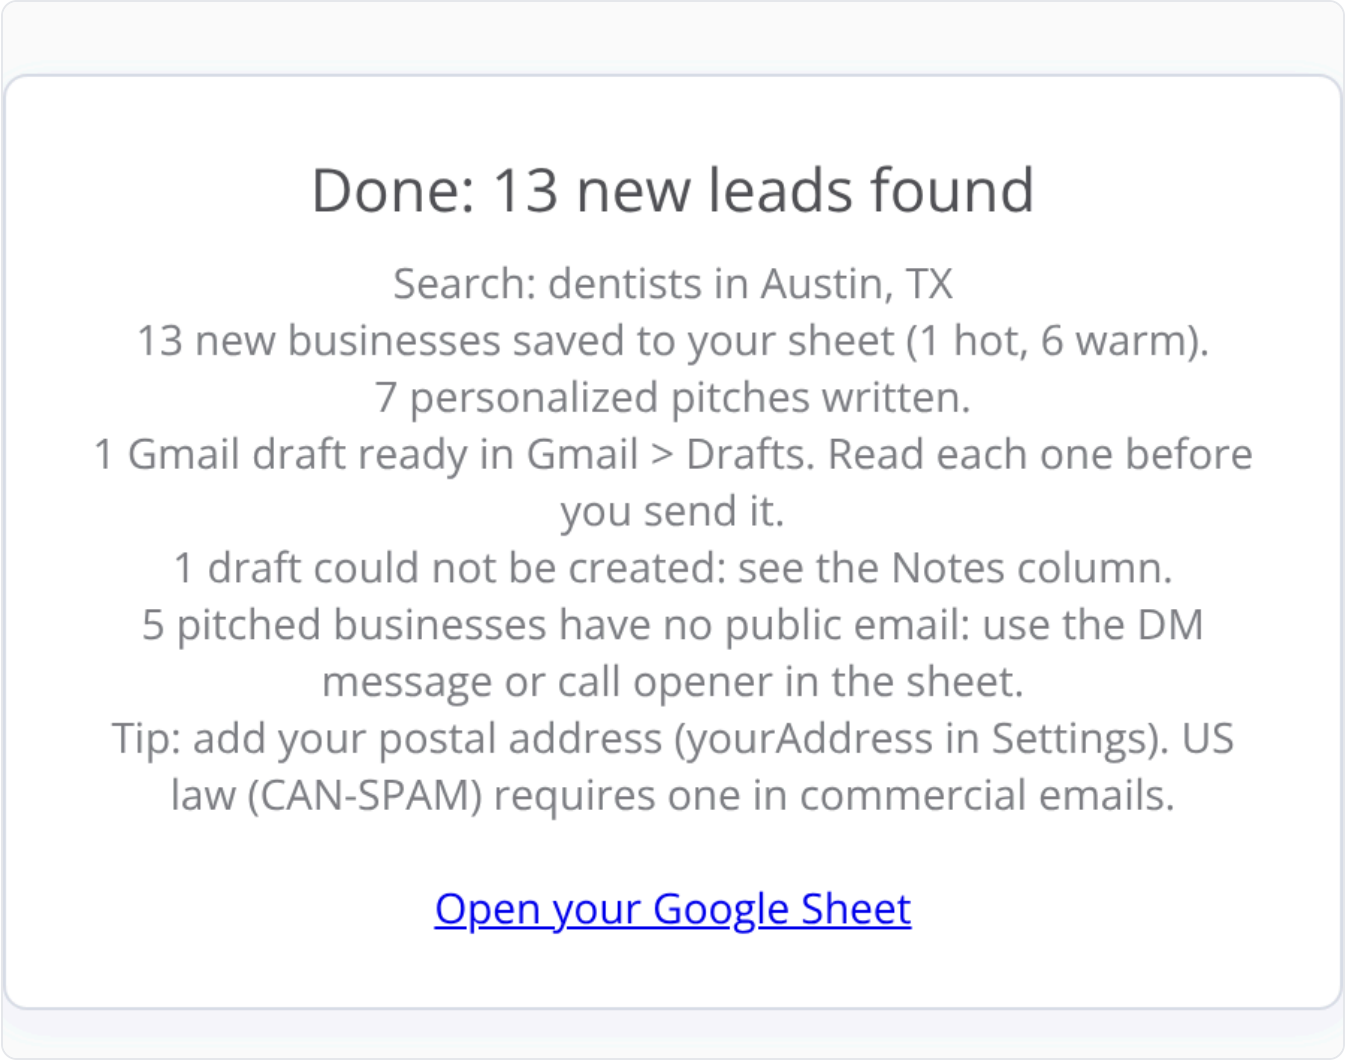

1. Set up everything (about 30-45 minutes)

Follow SETUP-GUIDE.pdf from start to finish. In the ⚙️ *Settings* node, put your real name in **yourName** and paste your sheet's address into **googleSheetUrl**. The workflow will not run until both are filled in.

2. Run your first search (about 5 minutes)

Open the form from the *Find Clients Form* node. Try `dentists` in your own city, and choose **20** businesses. A run takes about 2-8 minutes, so keep the browser tab open, and don't submit another search until it is done.

Each run saves every lead to your sheet first. Then it creates the Gmail drafts and writes each draft's ID back to the sheet.

Example results page. Your numbers will differ.

3. Read and send your best 5 drafts (about 15 minutes)

1. In your sheet, pick the 5 leads with the highest **Score** and the status **Draft ready**.
2. In Gmail, open **Drafts**. Check each draft against the **Evidence** column in your sheet.
3. Change anything that does not sound like you, then click **Send**.
4. In the sheet, change their **Status** to **Contacted**.

Leads with the status **Pitch ready** usually have no public email (if a Gmail draft failed, **Notes** says why). Use the **DM Message** or **Call Opener** columns to reach them by phone or social media.

Leads with the status **New** got no pitch. Their score was too low, or their email address or website was already pitched under another listing (a chain location or a duplicate listing). The **Notes** column then says "Same email as ..." or "Same website as ...".

4. Tune your offer with PROMPTS (about 10 minutes)

Use PROMPTS.pdf to adjust your service, offer, sign-off and tone in ⚙️ *Settings*, so your next pitches sound more like you.

The 3 golden rules

1. **Read every draft before you send it.** You are the sender. Make sure each email is true, polite and sounds like you.
2. **Start with 10-20 emails a day from your own inbox.** Sending many emails at once can get you marked as spam. Grow slowly.
3. **Respect every "no thanks".** Every first email ends with an opt-out line. When someone says no, set their **Status** to **Do not contact** (or **Not interested**) and never email them again. Keep their row: future searches skip businesses that are already in your sheet, and never pitch that email address or website again, even under another listing.

> **Tip:** Some laws, such as the US CAN-SPAM Act, require a postal address in business email. Add yours in **yourAddress** in ⚙️ *Settings*. The results page reminds you while it is empty.

> **Tip:** Anyone with your form's Production URL can run searches on your accounts. Keep it private, and lock it with n8n's Basic Auth (*Find Clients Form* → **Authentication** → **Basic Auth**) or a hard-to-guess form path.

Need help?

Most workflow messages tell you what to fix. Still stuck? Email support@example.com. Include your n8n version, whether you use n8n Cloud or self-hosted, the node with the problem and the exact message. Never send your API keys.
